

# IBM® Storwize V7000 and IBM® Storwize V7000F

Maximizing storage efficiency to transform the  
economics of data

# Major Shifts and Disruption In The Storage Market

Cloud

Industry consolidation

Flash

Industry disruption

Software-defined

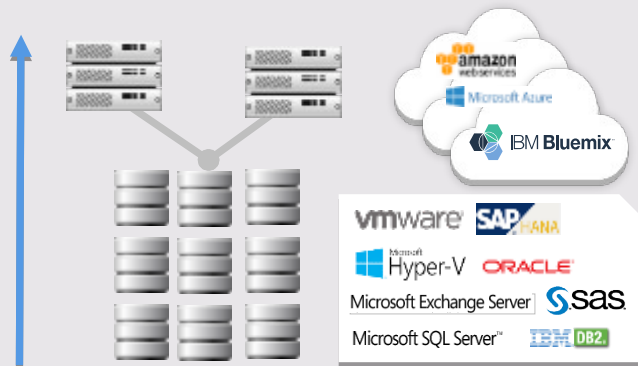

Clients are challenged  
with how to navigate  
into the future

**Uncertainty can cause hesitation**

# How Do You Move Forward?

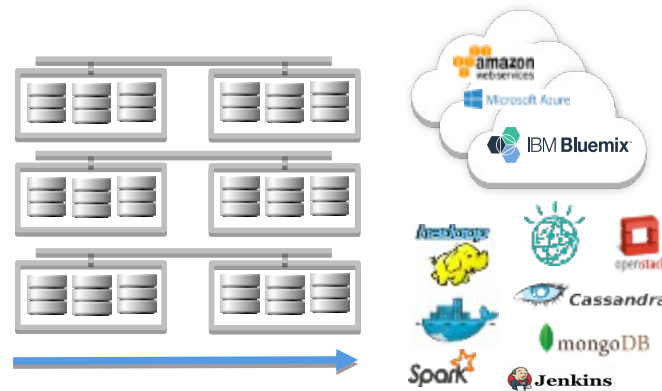

## Traditional Application Workloads

### Modernize

Optimize and drive efficiencies, while continuing to deliver high levels of service delivery

## New Generation Application Workloads

### Transform

Deliver and operate new application infrastructure to support new Cognitive and agile workloads

# Helping Organize to Modernize and Transform

## Traditional Application Workloads

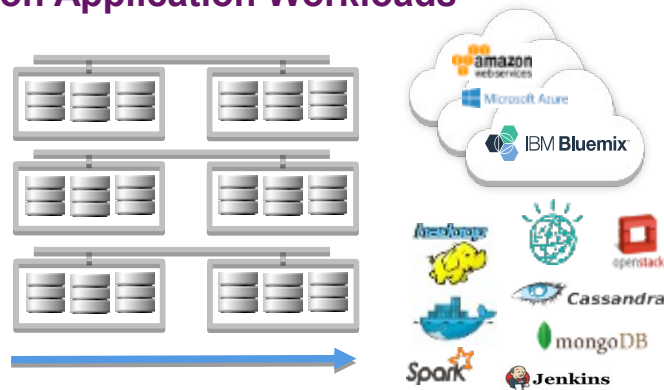

### Modernize:

Optimize and drive efficiencies, while continuing to deliver high levels of service delivery

Leverage automation, Flash and Cloud

## New Generation Application Workloads

### Transform

Deliver and operate new application infrastructure to support new Cognitive and agile workloads

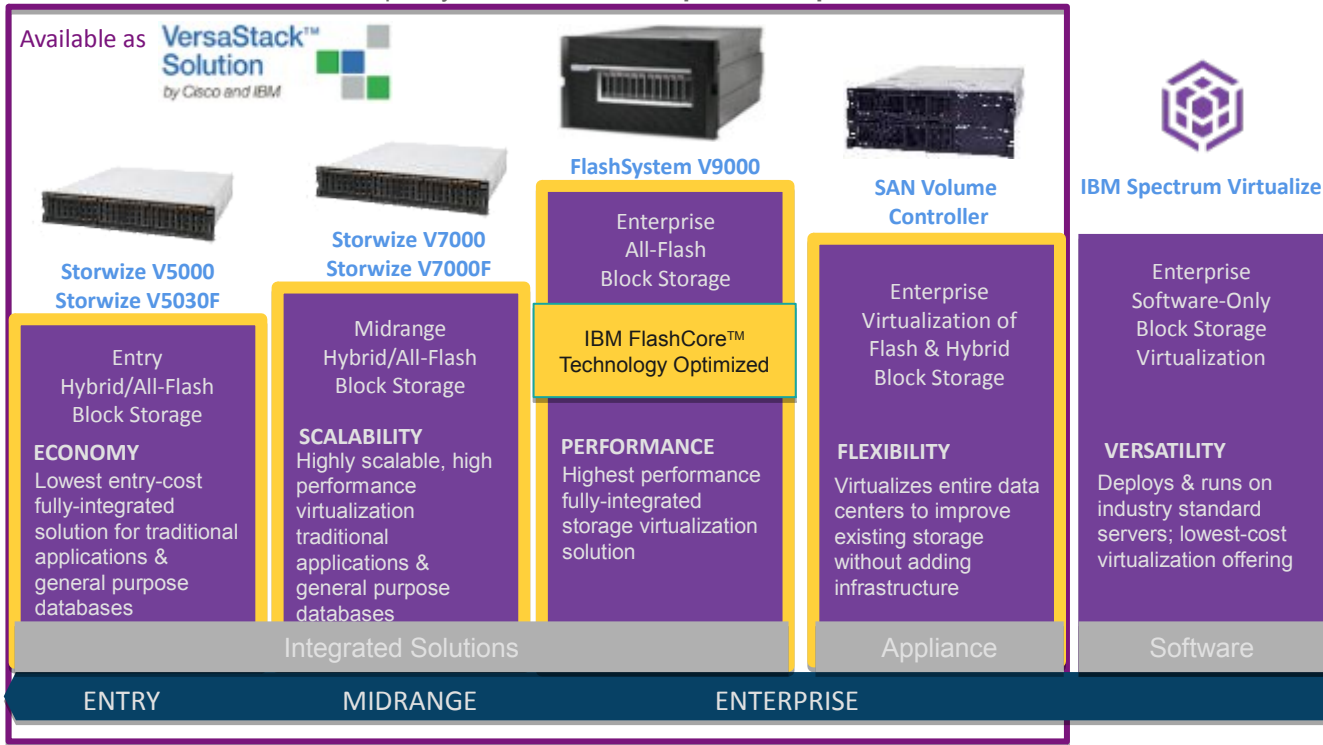

Leverage Software Defined, Flash and Cloud

**Become more agile to the demands of the business**

# Virtualized Storage Infrastructure

*Enterprise data services for heterogeneous environments*

All-flash, hybrid, and software-only solutions built on IBM Spectrum Virtualize software virtualize external storage under single management, and extend rich data services to externalized capacity **to reduce both cap-ex and op-ex.**

# IBM Storwize V7000 and IBM Storwize V7000F

*Maximizing storage efficiency to transform the economics of data*

**Accelerate critical business insight** with **all-flash performance** to improve core application response time

**Transform economics** by converting CAPEX to OPEX using **cloud storage** to complement or replace on-premises storage

**Improve your business agility** with **unique heterogeneous data services** that maximize efficiency and flexibility for more than 400 storage systems

**Support growing flash workloads** with **up to 8x larger** system and **32PB of flash storage** in only four racks

# IBM Storwize V7000 Hybrid Solution

*Cost optimized flash for heterogeneous environments*

## EFFICIENT

- Lower TCO with flash-optimized compression
- Improve utilization by 2X with virtualization support for more than 400 systems
- Maximize storage efficiency within provisioning and snapshots
- Unique hardware upgrade path
- **Flash optimized with Hardware-Assist Real-time Compression**, distributed RAID, and multi-layer write caching.

## FEATURE RICH

- **New fresh intuitive user interface**
- Transparent Cloud Tiering
- Asynchronous Replication
- Synchronous Replication
- VMware integrated
- Linked to OpenStack
- 600+ Storwize API

*Purpose-built for the cloud*

## SCALABLE

- Scale-up and scale-out for capacity and performance so that you can grow your storage with your business
- High density expansion enclosure: **3x better drive density** with up to 92 drives in only 5U
- Management of **up to 32 PB** by a single Storwize V7000 system

## DEPENDABLE

- Five 9's availability
- Protect data from disclosure with encryption for internal and virtualized storage
- Get highest levels of data protection and availability with remote site replication options and IBM HyperSwap

# IBM Storwize V7000F All-Flash Solution

*Accelerate Storage Efficiency*

## FAST

- Powerful hardware platform with all-flash configuration and **increased memory option with up to 256 GB** per system
- Increase the data storage of flash and lower deployment cost with multiple capacity flash drive options: **1.92TB, 3.84TB, 7.68TB & 15.36TB** flash drives

## FEATURE RICH

- **New fresh intuitive user interface**
- Transparent Cloud Tiering
- Asynchronous Replication
- Synchronous Replication
- VMware integrated
- Linked to OpenStack
- 600+ Storwize API

*Purpose-built for the cloud*

## EFFICIENT

- Lower TCO with flash-optimized compression
- **Improve utilization by 2X** with virtualization support for **more than 400 systems**
- Maximize storage efficiency with thin provisioning and snapshots
- Unique hardware upgrade path
- Flash optimized with **Hardware-Assist Real-time Compression**, distributed RAID, and multi-layer write caching.

## DEPENDABLE

- **Five 9's** availability
- Protect data from disclosure with **encryption** for internal and virtualized storage
- Get highest levels of data protection and availability with remote site replication options and **IBM HyperSwap**

# Scalability

- High-capacity, archival-class nearline disk drives in 6 TB, 8 TB, and 10 TB 7,200 rpm
- High-performance, enterprise class disk drives in 600GB, **900GB** 15,000 rpm, 1.2 TB, and 1.8 TB 10,000 rpm
- Flash drives in 1.6 TB, 1.92 TB, 3.2 TB, 3.84 TB, 7.68 TB and 15.36 TB

System	V7000(F)
SAS chains (per controller)	2
Dense expansions	8
Drives/controller	760
Drives/cluster	3,040
Max cluster capacity, NL HDDs (raw)	29.7 PB <sup>1</sup>
Max cluster capacity, flash drives (raw)	32.0 PB*

<sup>1</sup>Storwize V7000 only

\*Spectrum Virtualize maximum managed capacity/cluster = 32PB

Drives not interchangeable with 2U enclosures

*Storwize V7000 supports up to four dense expansions per SAS chain*

	Config 1	Config 2	Config 3	Config 4	Config 5
1	Standard	Dense	Dense	Dense	Dense
2	Standard	Standard	Dense	Dense	Dense
3	Standard	Standard	Standard	Dense	Dense
4	Standard	Standard	Standard	Standard	Dense
5	Standard	Standard	Standard	Standard	
6	Standard	Standard	Standard		
7	Standard Standard = 2U; Dense = 5U	Standard	Standard		
8	Standard	Standard	Enclosure types can be mixed in any order on SAS chains		

# IBM Real-time Compression

Shrinks active data up to **80%** without degrading application performance

Supports **active data**, unlike other storage compression solutions

- More data = more benefit

**Cuts storage cost  
in half or more**

**GUARANTEED**

# Storwize V7000 With IBM Spectrum Virtualize Transforms Storage

## Improving data value

Reducing the cost of storing data by increasing utilization and using compression, and accelerating applications to speed business insights

## Increasing data security

Helping protect data from disclosure, and enabling a complete high availability strategy including data and application mobility and full DR protection

## Enhancing data simplicity

Data strategy independent of infrastructure choice with tightly integrated functionality and consistent management across heterogeneous storage

# Improving Data Value

**Improves efficiency of your storage**, increasing utilization up to double

**Increases amount of data you can store**, enabling up to 5x as much data to be stored in the same space

**Improves storage performance** so you can get more done with your data

**Optimizes storage use** by moving data to the most appropriate type of storage based on policies you define with IBM Spectrum Control

# IBM Spectrum Virtualize Management

Physical storage is virtualized and “hidden” from servers

- Enables rapid, flexible provisioning and simple configuration changes
- Enables non disruptive movement of data among tiers of storage
- Enables data placement optimization to improve performance

Rich integrated function applies to all storage

- Functions including compression, replication, tiering, high availability, encryption
- Single user interface to manage all storage, regardless of vendor
- Move data transparently between different storage systems
- Extends life and enhances value of existing storage assets

Delivers agility and efficiency to existing and new storage

*“Storage virtualization has been key to providing **efficient and cost-effective storage** solutions for our data center”*

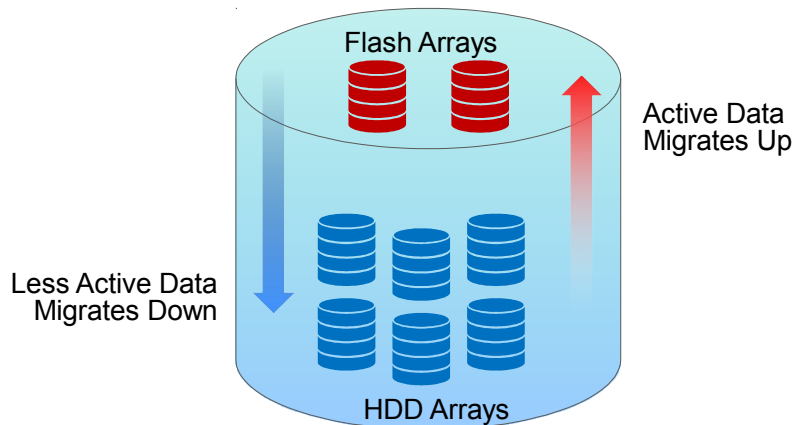

# IBM Storwize V7000 Tiering

Take the guesswork out of managing workloads across multiple tiers of storage

Policy-based data placement provides objective analysis of workload placement

Intelligent analytics make recommendations based on historical performance with automated, transparent migration to appropriate storage tier

**Set it and forget it** ... unlike competitive tiering offerings

# Increasing Data Security

**Improves data security** with software based encryption

**Improves data protection** with 5-10x faster rebuild of data following a drive failure

**Improves data availability** with fully duplexed copies of data and automatic switchover across data centers

**Eliminates storage downtime** with nondisruptive movement of data from one type of storage to another

# Encryption for Internal and External Virtualized Storage

- Adds encryption to existing storage systems

  - Helps to improve data security

  - Eliminates capital expense for new storage systems or drives to enable encryption

  - Reduces operating expense with single point of administration for encryption across multiple heterogeneous storage systems

- Minimal impact on performance

  - Takes advantage of Intel AES-NI processor instructions to perform encryption

- IBM Spectrum Virtualize encryption addresses all these use cases

- Typical encryption use cases

  - Protection against disclosure of data when drives removed

    - Malicious removal of drives

    - Drives returned to vendor as part of maintenance actions

  - Secure erasure of storage

    - Drives or arrays being reused for different data

    - System being sold or otherwise disposed of

# Encryption Key Management

Support to encryption key management software IBM Security Key Lifecycle Manager (SKLM)

- Help centralize, simplify and automate the encryption key management process
- Minimize risk and reduce operational costs

Improves availability of keys by providing greater redundancy

IBM Spectrum Virtualize supports up to four SKLM key servers

- One master, up to three clones

Supports use of SKLM and USB concurrently

# Data Protection with Distributed RAID

## Improved RAID implementation

- Faster drive rebuild improves availability and enables use of lower cost larger drives with confidence
- All drives are active, which improves performance especially with flash drives

## Spare capacity, not spare drives

Rotating spare capacity position distributes rebuild load across all drives

## More drives participate in rebuild

- Bottleneck of one drive is removed

## More drives means **faster rebuild**

- **5-10x faster** than traditional RAID
- Especially important when using large drives

## No “idle” spare drives

- All drives contribute to performance
- Especially important when using flash drives

# Extreme High Availability with IBM HyperSwap

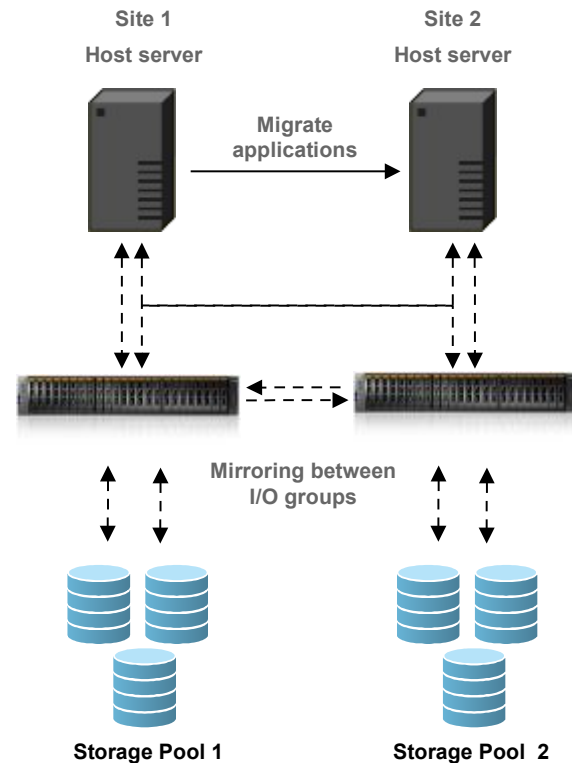

Extreme high availability solution

Completely redundant storage infrastructure even after site failure

Continuous data access with no performance impact

Freely move data without disruption across sites

Eliminate costs of downtime

# Disaster Recovery with IP Replication

Enables use of Ethernet connections for remote mirroring

Transparent to servers and applications

Includes Bridgeworks WANrockIT network optimization technology

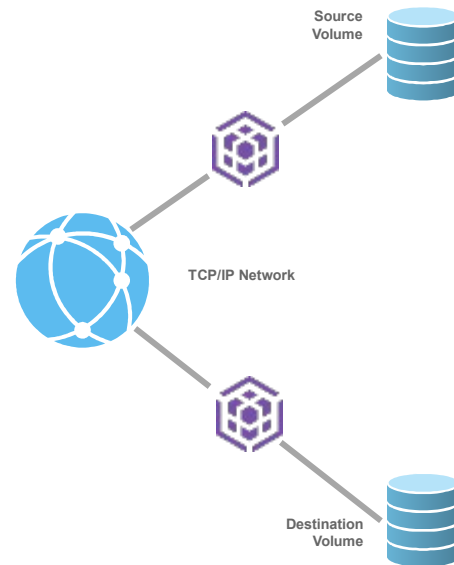

- No separate appliances required

- Uses artificial intelligence to improve

- network bandwidth utilization **up to 3x**

Deploy less costly network infrastructure

Speed replication cycles for better remote data currency and faster recovery

# Enhancing Data Simplicity

**Improves agility** with automated provisioning of storage as it is required by applications, integration with virtualization tools such as VMware vCenter, and easy deployment of new storage technologies

**Enables hybrid cloud storage** with ability to extend new or existing storage capacity, on demand into the cloud

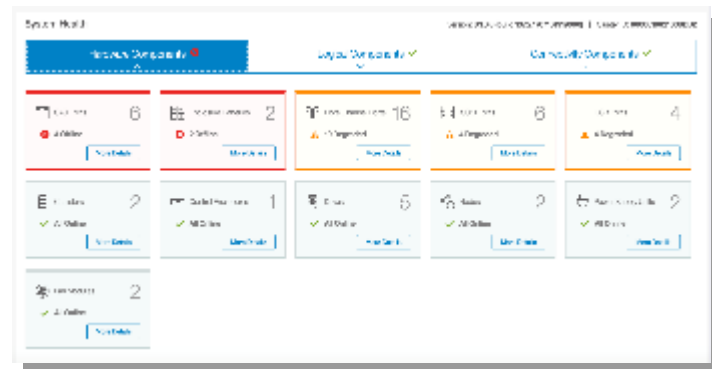

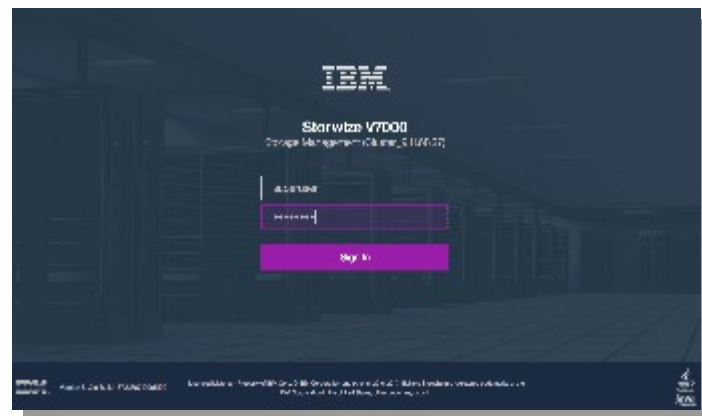

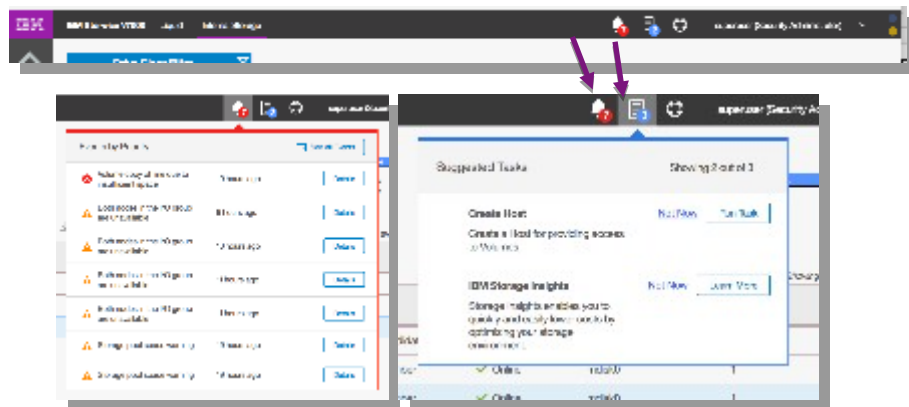

**Consolidates all your storage** – no matter the vendor – for simplified management, consistent functionality, and greater efficiency

**Enables flexibility in storage acquisition** by supporting common capability across all types of storage so you can mix vendors with ease

## New fresh and modern look and feel

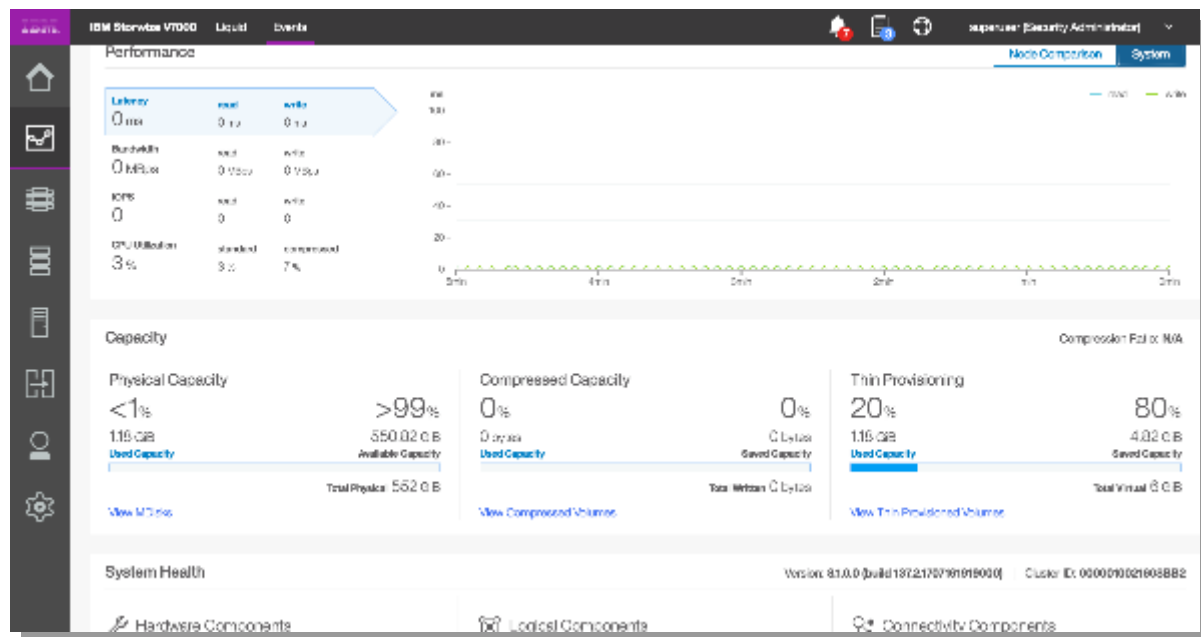

- Consistent with other IBM Spectrum Storage software
- Preserves familiar panel layout to ease transition

# New GUI: Dashboard

“At-a-glance” view of system activity and state

- Performance
- Capacity
- System health

# Transparent Cloud Tiering

Interfacing **cloud storage** into an existing **on-premises storage** environment

IBM **Spectrum Virtualize**

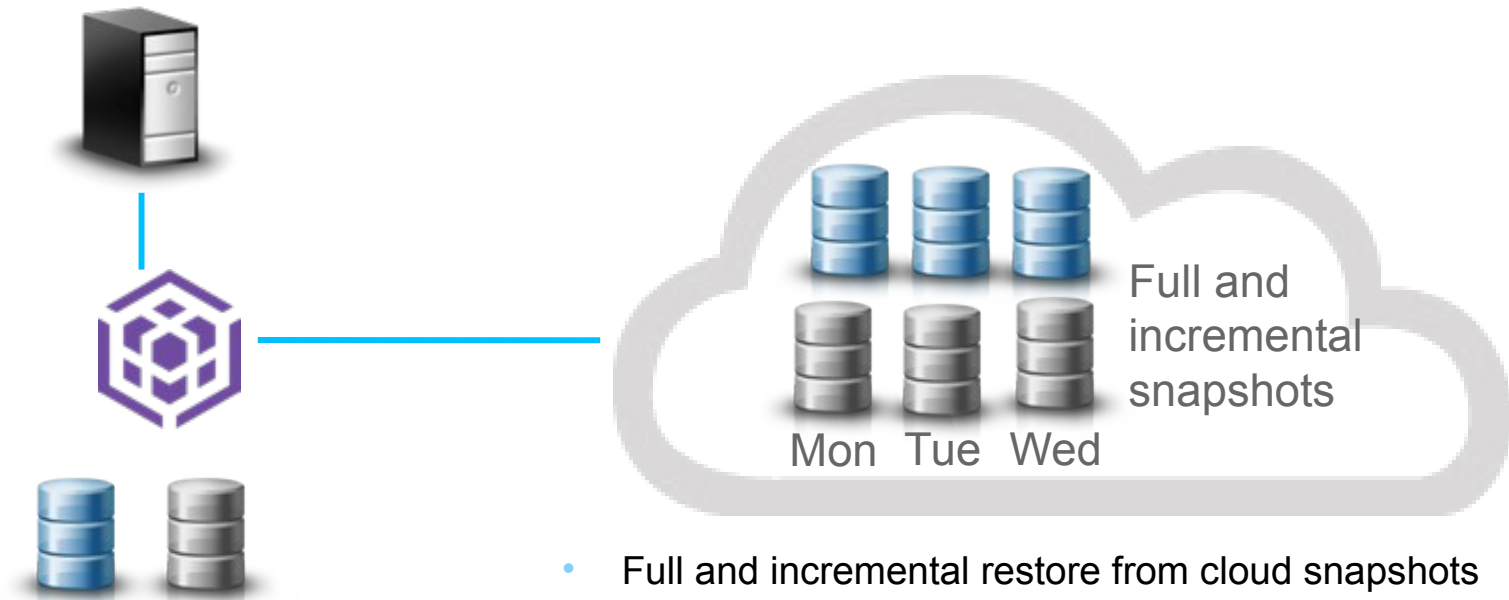

Over 400 storage systems  
from IBM and others

- Preserves **performance** of local storage
- Preserves **agility of deployment** of cloud storage
- Preserves **simplicity of configuration** across many host types
- Uses **existing SAN configuration skills**

# IBM Spectrum Virtualize Cloud FlashCopy

- Full and incremental restore from cloud snapshots
- Supports volume groups for mutual consistency
- Import and export of volumes between systems
- Supported cloud providers: IBM Softlayer, Openstack Swift, Amazon S3

# Revitalize Your Business Opportunities

- *Optimize data economics with a powerful combination of flash and storage virtualization*
- *Deploy the right all-flash or hybrid solution to solve your unique business and IT requirements*
- *Revitalize your existing storage with a combination of IBM Spectrum Virtualize and IBM Storwize family*
